

GLOBAL HIGH VOLTAGE TRANSMISSION LINE PROJECTS DATABASE AND REPORT 2017

Global Transmission Research will release the third edition of its Global High Voltage Transmission Line Projects Database and Report in June 2017 in a new format (updated regularly).

The database will track over 1,300 projects (at voltage levels of 220 kV and above) in about 100 countries. The projects have been classified as either under construction, or under contractor selection, or under development, or announced/proposed. The countries are organised into six regions: North America, Latin America, Asia, Europe, the Middle East, and Africa.

The package will comprise a PDF report and an excel database. The PDF report will provide an introduction to the database and an analysis of the projects included in the database, in terms of region, voltage level, technology, type of line and status.

The excel database will provide detailed and up-to-date information on each project, including a description, developers, route, rated voltage (kV), technology (AC or DC), length (km), estimated cost, current status, contractors, scheduled completion, and contact details. There will a separate excel workbook for each of the six regions.

The database will be updated regularly. A quarterly report on new developments on the projects will be sent to the report buyers at the end of every quarter. The database will also be later available online to the report buyers on our website www.globaltransmission.info

The database and report package is priced at USD5,400.

Sources and Methodology

Global Transmission Research's industry analysts have utilised various primary and secondary research sources in preparing the database and the report. Primary sources include information obtained through questionnaires sent to various utilities, transmission companies, transmission system operators and industry regulators. Extensive secondary research has also been conducted by our analysts and research associates. These secondary sources include, but are not limited to: websites of utilities; annual reports and financial reports of utilities; investor presentations; analyst reports; government documents, plans and statistical databases; websites of relevant ministries and regulators; websites of relevant industry associations; internal and external proprietary databases; news articles; and press reports. Wherever applicable, all research sources are appropriately cited within the report. These primary and secondary research sources, combined with our industry expertise, have been synthesised to prepare this report.

The data on line lengths, voltage, etc. are actual figures obtained from primary and secondary sources. In a few cases, where this data was not available, we have made reasonable assumptions. For example, in cases where the exact line length of a project was not available, we have used the approximate distance between the start and the end points of the project.

Global Transmission Research takes every possible care to provide information using resources it believes are most accurate and reliable. It, however, shall not be liable for any losses or consequences, if any, arising from the use of the information contained in the document.
